IMPACT

Goal-based DevOps Intelligence to optimize software delivery and drive results

The first goal-based DevOps Intelligence solution, XL Impact delivers integrated KPIs to show the health of your Continuous Delivery pipeline. It combines DevOps best practices with historical analysis, machine learning, and data from across your tool chain to show trends, predict outcomes, and recommend actions. Use XL Impact to optimize your delivery pipeline, drive ROI, and mitigate risk.

Goal-based DevOps KPIs

Track DevOps performance and gain actionable insight across your complete software delivery value stream. Drive core goals such as "improve quality" and "increase speed of delivery." Get clear context for your metrics to understand the meaning behind the numbers, so you can best direct optimization efforts.

Data-driven Recommendations and Decision Support

With full visibility into the inner workings of your DevOps pipeline, you can take actions based on hard data correlated from tools such as XL Release, Jenkins, JIRA, and GitHub. Get suggestions for optimal next steps and recommended actions based on your team's historical data, machine learning, DevOps best practices, and the current status of your pipeline.

Predictive Analytics that Identify Trends and Highlight Risk

Spot positive and negative trends, anomalies, at-risk areas, and high- and low-performing processes, so you can address problems before they become failures. Accelerate "concept to cash" for new features by avoiding bottlenecks, improving rate of successful releases, and replicating high-performing processes.

One Control Panel for DevOps Impact and ROI

Share the impact of your activities and demonstrate ROI to stakeholders with dashboards specifically curated for DevOps. Leverage deep end-to-end analysis that spans your entire Continuous Delivery pipeline. XL Impact presents a dynamic, living infographic of past, present, and predicted future states of your release pipeline in a single holistic view.

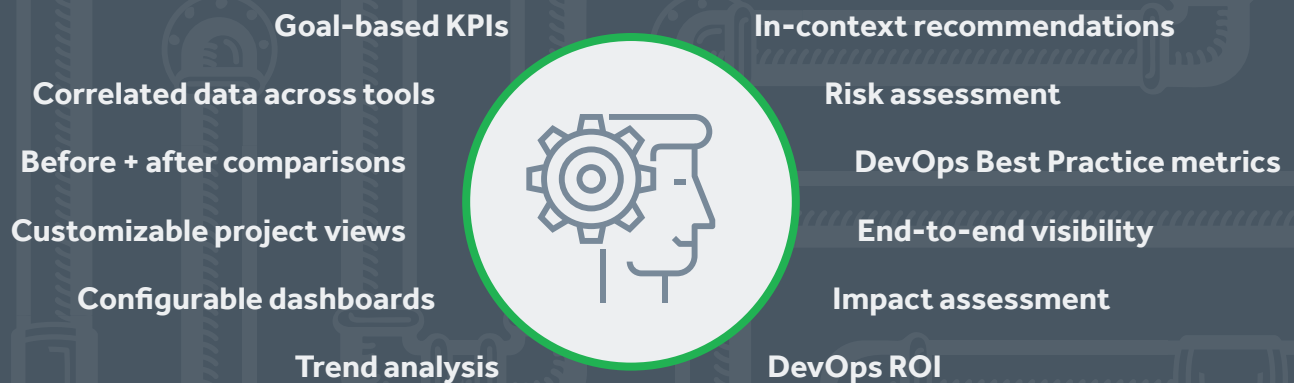

DevOps initiatives often show immediate gains when implemented for one team or app. But when you start to scale across many teams and apps, it's a very different game.

- Is your team implementing DevOps, but struggling to fully understand the impact of your initiatives?
- Are you making decisions "in the dark," based on incomplete and subjective data?
- Do you need guidance and recommended actions to help optimize delivery processes according to DevOps best practices?
- How do you know which processes are working and which ones aren't? How do you show ROI?

"Clear metrics based on best practices are essential for the success of DevOps initiatives. Companies have struggled for years to properly assess the overall impact of their efforts to improve software delivery. XebiaLabs' XL Impact provides a new and unique way to assess DevOps performance. Its outcome-based metrics allow organizations to strategically build, track, and adjust roadmaps for their DevOps transformations."

- Nicole Forsgren, Founder and CEO of DevOps Research and Assessment (DORA)

DevOps Intelligence Across the Pipeline

About XebiaLabs

XebiaLabs develops enterprise-scale Continuous Delivery and DevOps software, providing companies with the visibility, automation and control to deliver software faster and with less risk.

Release Orchestration

Orchestrate, automate, and get visibility into release pipelines

Deployment Automation

Automate and standardize complex application deployments

DevOps Intelligence

Get unprecedented insight and decision support for your software delivery process
